**Homework #3. TCP Sliding Window**

Submit a single .zip file containing your solutions to HW **exercises 1 to 3, only**. Exclusively .pdf and files are accepted.  
Submit via agora by 09:00 on Monday 21<sup>st</sup>-October-2024.

**Introduction**

The trace included below between page numbers 3 and 17 represents the lifecycle of a TCP connection between a client host (C) and a server (S). Processes C and S run in two in Lab B6 (See fig. 1). The programs executed in C and S correspond to the client and server programs from the practicals that we did this week (#42), which source code is available in paloalto.unileon.es.

The server process opens a TCP socket at port 60000 and turns it into a Welcome Socket (State is always LISTEN). Afterwards, the client process creates a client socket and connects with the server. When the connection is ready, it is the client that sends a 3KB block of data (a, b, c, d, ...) to the server, which responds by sending back the message "Unknown request". We want to analyze the evolution of the snd.una and snd.nxt TCP state variables on the client, and the rcv.nxt on the server side as regards the 3KB transfer. Variables snd.una and snd.nxt point into c's Transmit Buffer (In the client) and, variable rcv.nxt points into s's Receive Buffer.

This homework aims to help you understand the dynamics of the state variables by using a concrete trace from a lab practical. To that end, we ask you to respond to questions 1 to 3, which are about the trace below. **The remaining questions will be discussed and solved in next Monday's lecture.**

Figure 1. Client and Server hosts in Lab B6 network with their socket IP addresses

1. What is the ISN (Initial Sequence Number) announced by C in the 3-way handshake (See segment the ISN to Seg 0).
2. What should be the response returned by the server to its receiving the preceding ISN? What segment (Seg n) is this response encapsulated into?

3. What is the value of `snd.una` and of `snd.nxt` after Seg 1 is received by c?

QUESTIONS 4 TO 11 Please, do not submit your solutions to the questions that follow WERE SOLVED IN CLASS (SEE SKETCH ON LAST PAGE)

4. Question about Seg 3. Right after this segment is fully built and handed over to IP for subsequent transmission:

- a. What is the value of `snd.nxt`?
- b. What is the value of `snd.una`?

5. Question about Seg 3. After this segment is fully received by the server's TCP, what is the value of that TCP's `rcv.nxt`? (Assume that `rcv.nxt` initial value was 0)

6. Question about Seg 4. After this segment is fully built and submitted to IP:

- a. What is the value of `snd.nxt`?
- b. What is the value of `snd.una`?

7. Question about Seg 4. After this segment is fully received by the server's TCP, what should be the value of `rcv.nxt`?

8. Question about Seg 5. After this segment is fully built and submitted to IP:

- a. What is the value of `snd.nxt`?
- b. What is the value of `snd.una`?

9. Question about Seg 5. After this segment is fully received the server's TCP, what is the value of `rcv.nxt`?

10. Question about Seg 6. Observe that ACK 3073, in this segment, means that up to byte with SN 3072 were successfully received by the server (s), which comprises all of the bytes sent by the client the first of which had a SN equal to the ISN announced by the client (These data must acknowledged by the server to the client).

- a. Does this segment carry data, or is it a *pure control* segment sent by s to c?
- b. Could this TCP segment be a quick ack?

- c. What should be the value of the TCP client's `snd.una` after ACK 3073 is received?
11. Questions about Seg 7.
- a. Which of the two hosts is the sender, in this case?
  - b. And the receiver, which is it?
  - c. What is the weight of the payload encapsulated into the segment (In bytes)?
  - d. What range of s-to-c SNs are covered by the data sent encapsulated into this segment?
  - e. What should be the *value* of ACK that, in the future, will effectively acknowledge the successful reception of this block of data by the client? Identify that ACK in a segment having a number (Seg n) larger than Seg 7.

## Trace to a TCP client write op of 3KB long to server

*Notice, each segment starts at a new page heading*
